

An innovative Water Treatment Solution

Utopia Eclear Water treatment System is based on Advanced Nano Technology which makes it possible to treat the Water in minutes not in hours like in Conventional Treatment Systems.

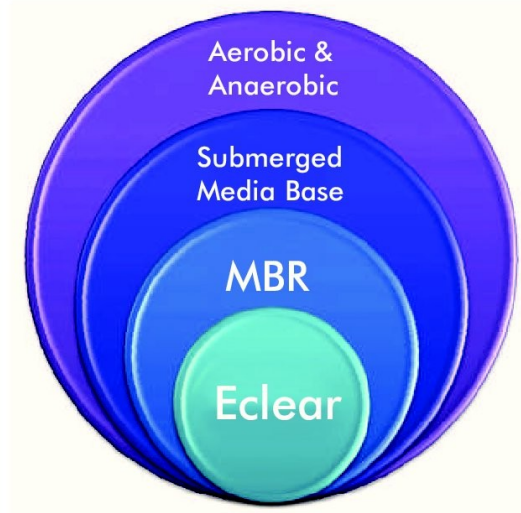

Utopia Eclear Unit Treat Water in two stages, first stage consists of Nano coated base electrochemical process and second stage consists of Advanced Membrane Unit. The first stage nano electrochemical process helps to remove organic and biological impurities with very low energy requirement.

Second stage Membrane Filtration Unit works at More than 90% Water recovery and Filter up to 0.02 micron particle size.

Less Foot Print Area

Technology	Water Reuse	Reduction in Solid Waste Generation	Energy Conservation	Saving in Foot Print	Performance Reliability	Chemical Cost Reduction

Advantages-

- Guaranteed Performance with Very Less Energy and Chemical Requirement.
- Operating Life of the System is More then 10 years with 5 Years Guarantee of System Operation.
- Less Foot Print Area required almost 1/20 th of Conventional Method (20 times less than Conventional Treatment)
- Fully Automatic System with No Manual Intervention required.
- Easy Operation with Compact Skid Mounted Unit.
- No Bacterial Cultural Maintenance and Preparation.
- More than 80% Water Recovery is Possible.
- Sludge Generation Less than 3% of total capacity.
- No more Hydraulic retention is required based on Online Process.
- Sludge generation is Compact & De watered so easy sludge handling.
- Low Capital and Operating Cost compared to any available working Technology.
- Treated Water is up to Potable Water Quality Grade.
- Can Withstand Waste water Quality Variations.
